

2018-19 Family Learning Sundays

An educational initiative of Providence Public Library

Join us...the 1st Sunday of the month at 2 pm October through May for a variety of interactive workshops for children ages 5 - 10 and their families.

October 14 — Dave Marchetti — Animal Experiences

Popular library presenter Dave Marchetti, is back! Come learn about and experience live animals. Animals will be available for petting.

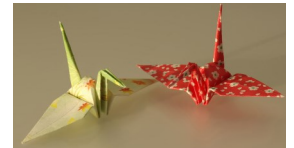

November 4 — POW Science Block Party!

Working in teams, children use the simple but amazingly versatile Citiblocs Building Blocks to overcome a series of engaging and fun problem solving tasks. Kids love racing against the clock and each other to build the tallest tower in the room.

December 2 — Origami with Rod Nice and Button Making!

Both always great hands-on fun! Join one of our favorite presenters Rod Nice as we create beautiful paper creations together. And, leave with your very own button also!

January 6 — Music & Storytelling with Christopher Kavi Carbone

Celebrate the coming of winter with music-making, song, rhythm and rhyme. This event will inspire the whole family so that we can awaken creative new possibilities as we start fresh in the New Year.

February 3 — Ballet with Ann Ditmars Huyck

Curious about ballet? Come try the five positions, stretches, turns, jumps and pantomime and put them into action to express a variety of moods and stories to music! Wear comfortable clothing (no special ballet gear needed). This workshop is open to boys & girls trying ballet for the first time along with young dancers who want to have some fun with steps they know!

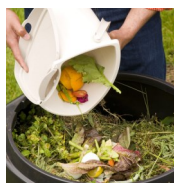

March 3 — Printmaking with RISD Artist/Educator Anna McNeary

Using hand-cut paper stencils and printmaking materials, we will create one-of-a-kind pictures built up from layers of colors and shapes.

April 7 — Building with Repetitive Geometry with Artist/Designer Kristina Brown

Using basic craft supplies, construct sculptural structures with geometric forms. Kids will pick a geometric shape and assemble multiples of the same shape to create unique geometric sculptures.

May 5 — URI Master Gardener Kate Aubin Teaches Composting

When we're done eating, where do our food scraps go? In this hands-on program, you'll learn about the importance of composting and how you can start doing it at home. We'll get our hands dirty, explore what role worms play in the process, and plant some seeds in compost to take home.
